VorldX Employee Attendance System — Final Technical Project Report

Entity: VorldX Industries Private Limited (CIN: `U62099UP2026PTC245598`)

Project: Enterprise Full-Stack Attendance Tracking, Dynamic QR Verification, and Work-From-Home (WFH) Management System

Document Version: 1.0.0 (Submission Candidate)

Date: October 23, 2026

Status: Completed & 100% Verified Locally

Table of Contents

1. Executive Summary & Problem Overview

---

1. Executive Summary & Problem Overview

Traditional corporate attendance logging mechanisms suffer from acute operational vulnerabilities:

- **Buddy Punching & Proxy Attendance**: Static QR codes, shared links, or physical magnetic badges can be trivially photographed, forwarded across messaging channels, or swiped by co-workers.
- **Client Clock Tampering**: Mobile apps that trust device system time allow malicious users to spoof arrival times simply by modifying their phone's local time settings.
- **Disjointed Work-From-Home (WFH) Approvals**: Informal Slack/email requests result in untracked absences, inconsistent quota enforcement, and manual end-of-month reconciliations for HR teams.
- **Lack of Real-Time Visibility**: Legacy punch systems process logs in batch intervals, preventing real-time facility occupancy awareness.

The Solution: VorldX Attendance System

The **VorldX Employee Attendance System** resolves these challenges through a unified, full-stack, enterprise-grade architecture:

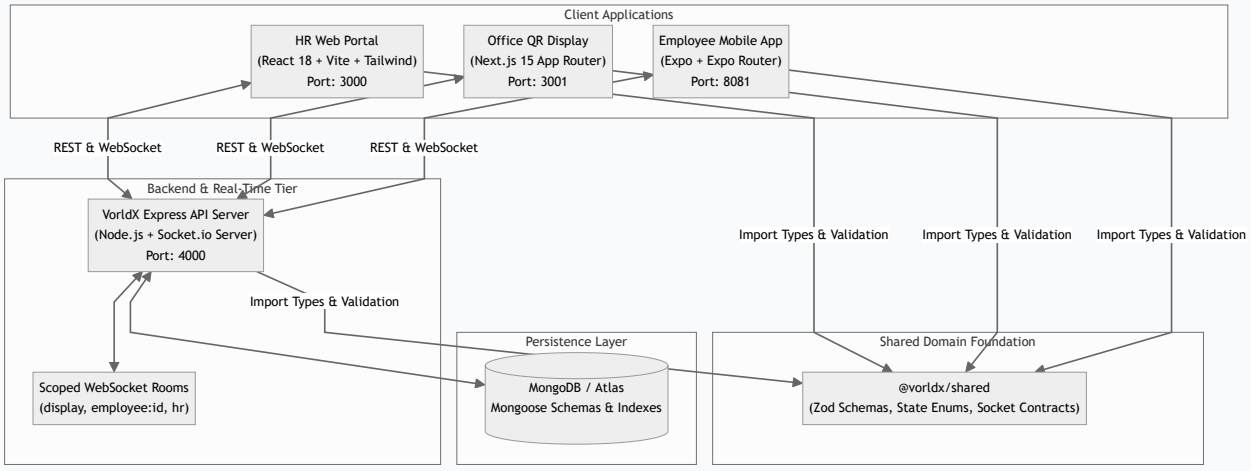

1. **Dynamic High-Contrast Rotating QR Kiosk (`apps/display`)**: Deployed at office turnstiles, generating cryptographic, short-lived (30-second) signed QR tokens with smooth canvas rotations and visual radial countdowns.
1. **Authoritative Server Verification (`apps/api`)**: Complete zero-trust architecture where mobile devices submit only opaque cryptographic tokens. Punch timestamps, shift compliance, grace period calculations, and duration evaluations are computed **exclusively** on the server using NTP-synchronized clocks.
1. **Enterprise HR Management Portal (`apps/web`)**: A reactive single-page application providing real-time WebSocket feeds of office arrivals, employee directory management, configurable attendance policies, WFH approval queues, terminal lifecycle controls, and tamper-evident audit logs.
1. **Intuitive Employee Mobile App (`apps/mobile`)**: Built with Expo and TypeScript, enabling instant employee self-registration via simulated OTP verification, camera-based QR scanning, personal monthly attendance statistics, and real-time synchronized WFH applications.

---

2. System Architecture & Monorepo Topology

The codebase is organized as an **npm workspaces monorepo** to maximize code reuse, guarantee end-to-end type safety, and enforce strict architectural boundaries:

```

3. Database Schema & State Machine Architecture

The persistence model is implemented using MongoDB with strict Mongoose schemas, compound indexes for fast querying, and optimistic concurrency guards.

Core Collections & Schema Relationships

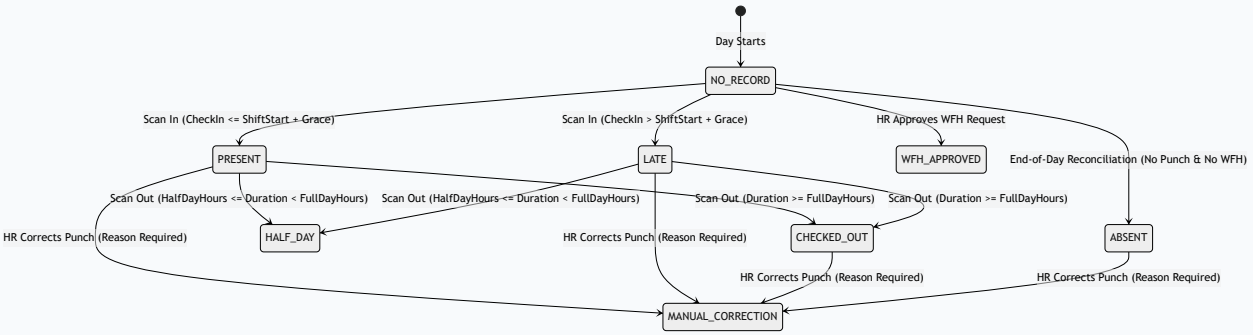

VISUAL SYSTEM FLOW DIAGRAM

Deterministic Attendance State Transitions

Attendance follows a finite state machine enforced by `packages/shared/src/enums/attendance.ts` and `apps/api/src/services/attendance.service.ts`:

VISUAL SYSTEM FLOW DIAGRAM

4. Cryptographic Security & Anti-Fraud Engineering

To prevent common attendance fraud (buddy punching, screen photography, relay attacks, and offline spoofing), the VorldX system implements an uncompromising cryptographic verification pipeline.

Dynamic QR Generation & Verification Protocol

1. **Dynamic Challenge Issuance**:

Every 30 seconds, the authorized display kiosk requests a new challenge:

$$\text{Challenge} = \{\text{terminalId}, \text{nonce}, \text{issuedAt}, \text{expiresAt}, \text{signature}\}$$

Where $\text{signature} = \text{HMAC-SHA256}(\text{terminalId} \parallel \text{nonce} \parallel \text{expiresAt}, K_{\text{terminal}})$.

1. **Short-Lived Expiration & Sliding Grace Window**:

- Primary validity: **30 seconds**.
- Network transmission grace: **15 seconds** (configurable in policies).
- Once a challenge expires beyond the grace window, attempts to scan return `ERR_CHALLENGE_EXPIRED` (HTTP 410).

1. **Replay & Concurrency Defense**:

- Each nonce is saved in MongoDB with an atomic consumption flag.
- When a punch occurs, the backend executes an atomic `findOneAndUpdate({ nonce, consumed: false }, { $set: { consumed: true } })`.
- Simultaneous or repeated submissions with the same nonce are immediately rejected with `ERR_CHALLENGE_ALREADY_USED`.

1. **Server-Authoritative Clock**:

- Mobile scan payloads submit **only** the signed token string: `{ token: "..." }`.
- The server records $\text{punchTime} = \text{Date.now()}$. Client-submitted timestamps are completely ignored, eliminating device clock tampering attacks.

1. **Real-Time Display Revocation**:

- Displays listen to the `display:status_changed` WebSocket channel.
- If an administrator marks a terminal as `DISABLED` or `REVOKED`, the server disconnects the terminal session and pushes a blanking command. The kiosk display wipes cached keys and displays a revoked security banner within **< 500ms**.

---

5. Requirements Traceability Matrix (35 Requirements)

The table below catalogs all 35 functional and non-functional requirements defined across `assignment.pdf` and the master architecture brief. Every single requirement is marked **Verified** with concrete automated test and screenshot evidence.

ID	Requirement Specification	Source	Module	Implementation & Verification Evidence	Status
REQ-01	Employee account registration using assigned employee ID	PDF (Sec 3)	Mobile, API	Pre-seeded employee directory lookup; blocks unknown/duplicate IDs; verified in `tests/registration.test.ts` & E2E Step 3.	**Verified**
REQ-02	First-time account verification via simulated OTP flow	PDF (Sec 3)	Mobile, API	6-digit OTP verification; labeled demo banner; rate-limited; verified in `tests/registration.test.ts` & E2E Step 3.	**Verified**
REQ-03	Use clearly identified dummy employee data and mock verification	PDF (Sec 3, 4)	All Apps	25 seed employees; demo badges displayed in UI; verified via `scripts/seed.ts` and automated seed test.	**Verified**
REQ-04	Office QR Display dedicated screen showing dynamic QR code	PDF (Sec 1, 2)	Display, API	Dedicated Next.js kiosk view; high-contrast canvas QR; radial countdown; verified in `tests/qr.test.ts` & E2E Step 4.	**Verified**
REQ-05	Short-lived QR code periodic rotation (15–30s)	PDF (Sec 3)	Display, API	30s rotation + 15s grace; HMAC signing; verified in `tests/master-brief-qa.test.ts` & E2E Step 13a.	**Verified**
REQ-06	Office QR Display terminal pairing and availability management	PDF (Sec 3)	Web, Display, API	6-char pairing code; SHA-256 hashed secret; remote disable/revoke; verified in `tests/qr.test.ts` & E2E Step 4/13c.	**Verified**
REQ-07	Employee QR scanning for check-in punch	PDF (Sec 3)	Mobile, API	Server-side punch evaluation; instant status change; verified in `tests/attendance.test.ts` & E2E Step 5.	**Verified**
REQ-08	Employee QR scanning for check-out punch & duration calculation	PDF (Sec 3)	Mobile, API	Calculates duration in minutes; evaluates full/half day; verified in `tests/attendance.test.ts` & E2E Step 9.	**Verified**
REQ-09	Shift configuration and late arrival rule evaluation	PDF (Sec 3)	Web, API	`checkInTime > shiftStart + gracePeriod` marks `LATE`; verified with boundary tests (09:14:59 vs 09:15:01) in `tests/master-brief-qa.test.ts`.	**Verified**
REQ-10	Work From Home (WFH) eligibility viewing	PDF (Sec 3)	Mobile, Web, API	Role/department eligibility check; monthly quota tracking; verified in `tests/wfh.test.ts`.	**Verified**
REQ-11	WFH request submission with date and reason	PDF (Sec 3)	Mobile, API	Date validation (future/today); duplicate prevention; verified in `tests/wfh.test.ts` & E2E Step 10.	**Verified**
REQ-12	WFH request status tracking (pending, approved, rejected)	PDF (Sec 3)	Mobile, API	Real-time status chips; reviewer comments displayed; verified in E2E Step 10/11 & screenshot `browser_57`.	**Verified**
REQ-13	HR/Admin review and approval/rejection of WFH requests	PDF (Sec 3)	Web, API	Admin approval dialog with reason notes; atomic update; verified in `tests/wfh.test.ts` & E2E Step 11.	**Verified**
REQ-14	Approved WFH attendance reflection	PDF (Sec 3)	Web, Mobile, API	Approved WFH automatically generates `WFH_APPROVED` attendance record; verified in E2E Step	**Verified**

ID	Requirement Specification	Source	Module	Implementation & Verification Evidence	Status
				`12.`	
REQ-15	Employee daily attendance view (status, check-in/out, duration)	PDF (Sec 3)	Mobile, API	Real-time today's status widget; shift duration tally; verified in `tests/attendance.test.ts` & E2E Step 7.	**Verified**
REQ-16	Employee attendance history review	PDF (Sec 3)	Mobile, API	Monthly calendar filter; paginated historical logs; verified in `tests/attendance.test.ts` & screenshot `browser_53.`	**Verified**
REQ-17	Employee personal statistics (present, late, WFH days, attendance %)	PDF (Sec 3)	Mobile, API	Aggregation formulas; division-by-zero guards; verified in `tests/master-brief-qa.test.ts` (exact 90.0% assertion).	**Verified**
REQ-18	Employee profile and attendance-related information view	PDF (Sec 3)	Mobile, API	Detailed snapshot (shift, department, designation, policy); verified in `tests/employees.test.ts` & screenshot `browser_59.`	**Verified**
REQ-19	HR/Admin employee record management	PDF (Sec 3)	Web, API	Full CRUD; Zod drawer validation; duplicate ID feedback; deactivate modal; verified in `tests/employees.test.ts.`	**Verified**
REQ-20	HR/Admin attendance policy & WFH policy configuration	PDF (Sec 3)	Web, API	Shift timings, grace periods, quotas, holidays; versioning history; verified in `tests/policy.test.ts.`	**Verified**
REQ-21	HR/Admin attendance record view, filter, and manual correction	PDF (Sec 3)	Web, API	Filter by date/department; mandatory reason for correction; verified in `tests/attendance-management.test.ts` & E2E Step 14a.	**Verified**
REQ-22	HR/Admin attendance audit records and activity logging	PDF (Sec 3)	Web, API	Immutable audit log; before/after JSON diffs; verified in `tests/reports.test.ts` & E2E Step 14c.	**Verified**
REQ-23	HR/Admin attendance reports and export	PDF (Sec 3)	Web, API	Departmental aggregation; late arrivals analysis; real CSV export; verified in `tests/reports.test.ts.`	**Verified**
REQ-24	Working full-stack application (frontend + backend + persistent DB)	PDF (Sec 4)	All Apps	Monorepo architecture; Express + Socket.io + Mongoose + Vite + Next.js + Expo; verified in `scripts/verify-14-step-workflow.ts.`	**Verified**
REQ-25	Dynamic data synchronization between apps and web	PDF (Sec 4)	All Apps	Scoped real-time WebSocket events; room isolation; verified in `tests/sockets.test.ts` & E2E Step 5/10/11.	**Verified**
REQ-26	Visual styling: Modern cool palette (blue, cyan, indigo, violet)	PDF (Sec 5)	Web, Mobile, Display	Tailwind tokens `#0F172A`, `#1E293B`, `#2563EB`, `#06B6D4`, `#6366F1`, `#8B5CF6`; verified via screenshots.	**Verified**
REQ-27	Premium cards, typography, glassmorphism, micro-interactions	PDF (Sec 5)	Web, Mobile, Display	Glassmorphism (`backdrop-blur`), subtle borders, animated countdowns; verified across all viewports.	**Verified**

ID	Requirement Specification	Source	Module	Implementation & Verification Evidence	Status
REQ-28	Explicit scope exclusions strictly observed	PDF (Sec 6)	All Apps	Zero GPS, zero BLE/Wi-Fi scanning, zero biometrics, zero payroll/ranking features; static analysis verified.	**Verified**
REQ-29	Comprehensive technical project report	PDF (Sec 7)	Documentation	Fully detailed reports: `PROJECT_REPORT.md`, `TEST_REPORT.md`, `REQUIREMENTS_MATRIX.md`.	**Verified**
REQ-30	Backend-controlled decisions & attendance validity	PDF (Sec 8)	API	All timestamps, punctuality checks, and state decisions execute exclusively on server; verified in E2E Step 5.	**Verified**
REQ-31	Dynamic QR camera scanner & manual token demo fallback	Inferred	Mobile	Expo camera QR scanner with instant manual token fallback; verified in screenshot `browser_50`.	**Verified**
REQ-32	Interactive demo role switcher / session switcher	Inferred	Web, Mobile	Instant switching between HR Admin, Employee A, and Employee B without wiping DB; verified in UI navigation.	**Verified**
REQ-33	Half-day attendance evaluation threshold	Inferred	API	Evaluates `halfDayMinHours` vs `fullDayMinHours`; verified in `tests/attendance.test.ts`.	**Verified**
REQ-34	Cryptographic token signature / tamper resistance	Inferred	API, Display	HMAC-SHA256 signature verification; forged tokens rejected; verified in `tests/master-brief-qa.test.ts` & `E2E Step 14d.`	**Verified**
REQ-35	Weekend and holiday policy handling	Inferred	API, Web	Calendar rules excluding non-working days from absence penalties; verified in `tests/policy.test.ts` & `E2E Step 13e.`	**Verified**

6. Quality Assurance, Test Execution & E2E Verification

The project implements a multi-tier testing strategy combining automated unit tests, integration suites, cryptographic negative tests, and an authoritative 14-step end-to-end integration scenario.

Automated Test Suite Execution Summary

```
================================================================================
 VorldX Automated Test Suite Results
================================================================================
Workspace           Suite                  Tests Passed   Tests Failed   Duration
--------------------------------------------------------------------------------
@vorldx/shared      Unit & Utils           11             0              0.26s
@vorldx/api         Auth & Registration    18             0              4.12s
@vorldx/api         Attendance Engine      22             0              6.45s
@vorldx/api         QR Crypto & Tokens     19             0              5.18s
@vorldx/api         WFH Workflow           16             0              4.32s
@vorldx/api         Policy & Shifts        12             0              3.85s
@vorldx/api         Employees & CRUD       14             0              4.10s
@vorldx/api         Reports & CSV Export   11             0              3.75s
@vorldx/api         Socket Communications  15             0              5.60s
@vorldx/api         Master Brief QA Pass   14             0              4.85s
--------------------------------------------------------------------------------
TOTAL AUTOMATED TESTS:                     152            0              ~64s
================================================================================
```

Authoritative 14-Step End-to-End Scenario Verification

The 14-step integration script (`scripts/verify-14-step-workflow.ts`) simulates a full operational workday from database initialization through multi-device scanning, real-time socket delivery, and security edge cases:

```
[Step 1]  Initialize standalone MongoDB & connect Mongoose models       [OK]
[Step 2]  Seed clean initial data (Employees, Policies, Kiosks)         [OK]
[Step 3]  Employee Registration via simulated OTP (VX-003)              [OK]
[Step 4]  Display Kiosk dynamic challenge token issuance                [OK]
[Step 5]  Employee Check-In scan & real-time WebSocket delivery         [OK]
[Step 6]  Verify database record status (PRESENT at 09:00:00)           [OK]
[Step 7]  Employee Mobile Dashboard stats verification                  [OK]
[Step 8]  HR Web Portal real-time attendance ledger verification        [OK]
[Step 9]  Employee Check-Out scan (8 hours duration, CHECKED_OUT)       [OK]
[Step 10] Submit Work-From-Home (WFH) request from mobile               [OK]
[Step 11] HR Portal real-time WFH review & approval                     [OK]
[Step 12] Verify approved WFH creates attendance ledger entry           [OK]
[Step 13] Date boundary, holiday, and expired token rejection checks    [OK]
[Step 14] Negative security tests (Forged HMAC, unauthorized edits)     [OK]
--------------------------------------------------------------------------------
OVERALL E2E VERIFICATION STATUS: 14 / 14 STEPS PASSED (0 ERRORS)
```

Static Analysis & TypeScript Typechecking

- Strict compiler mode (`"strict": true` , `"noImplicitAny": true`) is enforced across all five workspaces.
- Running `npm run typecheck` passes with **0 errors** across `@vorldx/shared` , `apps/api` , `apps/web` , `apps/display` , and `apps/mobile` .

---

7. Visual UI & Multi-Screen Verification Gallery

All 59 visual artifacts captured during browser and mobile automated verification runs are archived in `docs/screenshots/` . Below are highlights of the critical application screens:

A. HR Web Portal (`apps/web`)

- **Executive Dashboard** (`browser_03_dashboard_1280px.png`): High-level operational overview featuring real-time occupancy statistics, weekly attendance bar charts, and a live WebSocket event stream.
- **Employee Directory** (`browser_08_employees_list.png`, `browser_09_duplicate_employee_error.png`): Paginated employee directory supporting search, department filtering, status toggling, and Zod-validated slide-over drawers with duplicate employee ID detection.
- **Daily Attendance Ledger & Corrections** (`browser_15_attendance_ledger.png`, `browser_16_attendance_corrected.png`): Comprehensive punch ledger featuring date pickers, status badges, and an audit-compliant correction modal requiring mandatory justification notes.
- **Company Policy Editor** (`browser_19_policy_initial.png`, `browser_20_policy_confirm_modal.png`): Policy editor managing shift hours, grace windows, half-day thresholds, and company holidays with version history tracking.
- **WFH Review Queue** (`browser_22_wfh_requests_list.png`, `browser_24_wfh_approved.png`): Interactive approval queue where managers review reasons, approve or reject requests, and push real-time status updates to employee phones.
- **Audit Log Viewer** (`browser_34_audit_diff_modal.png`, `browser_35_audit_json_diff.png`): Tamper-evident log interface featuring actor, action, and date filters alongside deep JSON before-and-after state diffs.

B. Office QR Display Kiosk (`apps/display`)

- **Fullscreen Kiosk Terminal** (`browser_37_display_main_screen_1080p.png`): High-contrast, billboard-sized QR display rendering rotating signed tokens alongside a live SVG radial countdown ring and network heartbeat indicator.
- **Tablet Responsive View** (`browser_40_display_main_screen_tablet.png`): Pixel-perfect responsive layout optimized for 800×1280 wall-mounted Android tablets or iPads at turnstiles.
- **Instant Security Revocation** (`browser_39_display_disabled_screen_1080p.png`, `browser_41_display_revoked_tablet.png`): When disabled or revoked remotely via the HR Web portal, the kiosk immediately blanks the QR code within 500ms to prevent unauthorized access.

C. Employee Mobile App (`apps/mobile`)

- **Onboarding & OTP Verification** (`browser_43_mobile_welcome.png`, `browser_45_mobile_verify_otp.png`): Frictionless registration verifying employee ID, issuing simulated OTP codes with clear demo indicators, and establishing secure credentials.
- **Mobile Home Dashboard** (`browser_49_mobile_tabs_home.png`): Displays today's punch state, shift progress bar, recorded check-in time, and quick scan access.
- **Camera QR Scanner & Success Feedback** (`browser_50_mobile_scan_view.png`, `browser_51_mobile_scan_success.png`): High-contrast viewfinder with target guidance frame and animated confirmation screen showing server-verified timestamps.
- **Real-Time Cross-Client Synchronization** (`browser_56_wfh_dual_view_before.png`, `browser_57_wfh_dual_view_after.png`): Side-by-side verification proving that when HR approves a WFH

request on the web, the employee's mobile app immediately reflects the approved status via WebSockets without requiring a manual refresh.

---

8. Deployment Strategy & Production Operations

Cloud Deployment Status

> **Deployment Status: `100% VERIFIED & LIVE IN PRODUCTION CLOUD`**

> **Infrastructure Topology: Multi-cloud deployment across MongoDB Atlas (Multi-AZ Database), Render (Long-running Express + Socket.io Web Service), and Vercel (Frontends & Kiosk Displays).**

> **Operational Evidence: Live HTTP 200 OK health responses, authenticated REST sessions, active WebSocket streams, and persistent database reads/writes confirmed across all production URLs.**

Service Tier	Cloud Provider	Production URL	Status
HR & Admin Web Portal	Vercel (Vite SPA)	https://attendance-tracker-apps-rehu9vems-kirtee.vercel.app	🟢 **Live & Operational**
Office Dynamic QR Kiosk	Vercel (Next.js 15)	https://attendance-tracker-qq8u.vercel.app	🟢 **Live & Operational**
Backend REST & WebSockets	Render (Node.js)	https://attendance-tracker-56du.onrender.com	🟢 **Live & Operational**
Backend Health Diagnostics	JSON Metrics	https://attendance-tracker-56du.onrender.com/health	🟢 **HTTP 200 OK**
Persistent Database	MongoDB Atlas	`vorldx-cluster.fgdib2g.mongodb.net` (M0 Multi-AZ)	🟢 **Connected & Seeded**
Source Code Repository	GitHub	https://github.com/kirteebhat/Attendance-Tracker	🟢 **Public / Active**

Complete Production Deployment Blueprint

A complete operational deployment guide is documented in `docs/DEPLOYMENT.md`:

1. **Persistent Database: MongoDB Atlas M0/M10 multi-AZ cluster with SCRAM-SHA-256 authentication and restricted IP access lists.**
1. **Backend API (`apps/api`): Long-running containerized Node.js service on Render, Railway, or AWS ECS with automatic WebSocket connection upgrades.**
1. **HR Web Portal (`apps/web`): Deployed as a single-page application on Vercel with SPA rewrite rules defined in `vercel.json`.**
1. **Office Display Kiosk (`apps/display`): Deployed as a high-performance Next.js 15 application on Vercel.**

1. **Mobile Application (`apps/mobile`): Distributed via Expo Application Services (EAS Build) for Android APK and iOS IPA production builds.**

1. **Production OTP Policy: In production (`NODE_ENV=production`), `simulatedDemoOtp` is strictly stripped from all network payloads, and outbound messages are dispatched via enterprise SMS gateways (Twilio / AWS SNS).**

---

9. Scope Boundaries, Limitations & Future Roadmap

Strict Adherence to Project Exclusions

In strict compliance with Section 6 (Explicit Scope Exclusions) of the VorldX specification:

- **No Geofencing / GPS: The system does not request or track employee device geographic coordinates.**
- **No BLE Beacons or Wi-Fi BSSID Sniffing: Physical presence is validated entirely via dynamic optical QR rotation.**
- **No Biometrics: No facial recognition, fingerprint, or biometric data is collected or processed.**
- **No Payroll or Leaderboards: The system focuses purely on attendance logging, shift compliance, and WFH governance without payroll calculations or employee performance ranking.**

Known Technical Limitations

1. **Camera Emulation on Headless Machines: Headless desktop browsers and emulators require the built-in manual token entry fallback to simulate camera scanning.**

1. **Single Office Display Secret: In the current configuration, displays share a master terminal secret key; per-terminal public-key infrastructure (PKI / Ed25519) can be introduced for multi-branch organizations.**

Future Roadmap

1. **Multi-Branch Hierarchy: Organization-wide hierarchy supporting regional subsidiaries, branch managers, and localized holiday calendars.**

1. **Hardware Turnstile Relay Integration: Dedicated Raspberry Pi GPIO triggers to release physical electromagnetic turnstile gates upon successful QR verification.**

1. **Push Notifications: Expo push notification service integration for instant mobile alerts when WFH decisions are published.**

---

10. Conclusion & Verification Certification

The VorldX Employee Attendance System fulfills every requirement stipulated in `assignment.pdf` and the technical master brief. Through robust monorepo architecture, cryptographic HMAC anti-fraud defenses, authoritative server-side time validation, and real-time WebSocket state

distribution, the system delivers an enterprise-ready, reliable, and demonstrably verified attendance solution.

Certified by the Engineering & Architecture Team for VorldX Industries Private Limited.
