LIVE CLOUD DEPLOYMENTS & PRODUCTION ACCESS LINKS

- HR & Admin Web Portal: https://attendance-tracker-apps-rehu9vems-kirtee.vercel.app
- Office Dynamic QR Kiosk: https://attendance-tracker-qq8u.vercel.app
- Backend API & WebSockets: https://attendance-tracker-56du.onrender.com (Health: /health)
- Database Cluster: MongoDB Atlas M0 Multi-AZ (vorldx-cluster.fgdib2g.mongodb.net)
- GitHub Monorepo: https://github.com/kirteebhat/Attendance-Tracker

PRE-SEEDED EVALUATOR DEMO CREDENTIALS

- HR Admin Account: admin@vorldx.demo / Admin@VorldX2026! (Full management privileges)
- Sample Employee 1: arjun.sharma@vorldx.demo (ID: VX-001) / Employee@VorldX2026!
- Active Kiosk Pairing Code: VX-8566 (generated from HR portal under QR Displays)

1. Executive Summary & Problem Overview

Traditional corporate attendance tracking suffers from acute vulnerabilities including buddy punching via forwarded photos, client clock tampering on employee mobile devices, and uncoordinated WFH requests. The VorldX Employee Attendance System solves these issues via a zero-trust, server-authoritative architecture comprising a rotating dynamic QR kiosk display (30s rotation + 15s grace), HMAC-SHA256 signed challenges with atomic single-use nonces, server-authoritative timestamps, a real-time reactive HR management portal, and an intuitive Expo React Native mobile application.

2. System Architecture & Monorepo Topology

The project is engineered as an npm workspaces monorepo enforcing end-to-end type safety:
- apps/api: Express REST API + Socket.io Server + Mongoose models + 141 Vitest tests.
- apps/web: HR Management Portal built with React 18, Vite, Tailwind CSS & TanStack Query.
- apps/display: Dedicated turnstile kiosk display terminal built with Next.js 15 App Router.
- apps/mobile: Employee mobile application built with Expo SDK 52, Expo Router & React Native.
- packages/shared: Universal Zod schemas, TypeScript interfaces, state enums & socket contracts.

3. Requirements Traceability Matrix (35 Requirements — 100% Verified)

REQ ID	REQUIREMENT SPECIFICATION & SCOPE	MODULE	STATUS
REQ-01	Employee account registration using assigned employee ID	Mobile, API	' Verified
REQ-02	First-time account verification via simulated OTP flow	Mobile, API	' Verified
REQ-03	Use clearly identified dummy employee data & mock verification	All Apps	' Verified
REQ-04	Office QR Display dedicated screen showing dynamic QR code	Display, API	' Verified
REQ-05	Short-lived QR code periodic rotation (15–30s) + HMAC signing	Display, API	' Verified
REQ-06	Office QR Display terminal pairing & availability management	Web, Display	' Verified
REQ-07	Employee QR scanning for check-in punch & server verification	Mobile, API	' Verified
REQ-08	Employee QR scanning for check-out punch & duration calculation	Mobile, API	' Verified
REQ-09	Shift configuration and late arrival rule evaluation	Web, API	' Verified
REQ-10	Work From Home (WFH) eligibility viewing & quota tracking	Mobile, Web	' Verified
REQ-11	WFH request submission with date, reason & duplicate guards	Mobile, API	' Verified
REQ-12	WFH request status tracking (pending, approved, rejected)	Mobile, API	' Verified
REQ-13	HR/Admin review and approval/rejection of WFH requests	Web, API	' Verified
REQ-14	Approved WFH attendance reflection in ledger & mobile stats	Web, Mobile	' Verified
REQ-15	Employee daily attendance view (status, check-in/out, duration)	Mobile, API	' Verified
REQ-16	Employee attendance history review with calendar navigation	Mobile, API	' Verified
REQ-17	Employee personal statistics (present, late, WFH days, %)	Mobile, API	' Verified
REQ-18	Employee profile and attendance-related information view	Mobile, API	' Verified
REQ-19	HR/Admin employee record management (CRUD, drawers, validation)	Web, API	' Verified
REQ-20	HR/Admin attendance policy & WFH policy configuration	Web, API	' Verified
REQ-21	HR/Admin attendance record view, filter, and manual correction	Web, API	' Verified
REQ-22	HR/Admin attendance audit records and activity logging	Web, API	' Verified
REQ-23	HR/Admin attendance reports and export (real CSV stream)	Web, API	' Verified
REQ-24	Working full-stack application (frontend + backend + DB)	All Apps	' Verified
REQ-25	Dynamic data synchronization between apps and web (WebSockets)	All Apps	' Verified
REQ-26	Visual styling: Modern cool palette (#0F172A, #2563EB, #06B6D4)	Web, Mobile	' Verified
REQ-27	Premium cards, typography, glassmorphism, micro-interactions	All Apps	' Verified
REQ-28	Explicit scope exclusions strictly observed (Sec 6 compliance)	All Apps	' Verified
REQ-29	Comprehensive technical project report & documentation suite	Docs	' Verified
REQ-30	Backend-controlled decisions & attendance validity (zero-trust)	API	' Verified
REQ-31	Dynamic QR camera scanner & manual token demo fallback	Mobile	' Verified
REQ-32	Interactive demo role switcher / session switcher	Web, Mobile	' Verified
REQ-33	Half-day attendance evaluation threshold calculation	API	' Verified
REQ-34	Cryptographic token signature & replay tamper resistance	API, Display	' Verified
REQ-35	Weekend and holiday policy handling without false penalties	API, Web	' Verified

4. Quality Assurance, Automated Testing & Verification Audit

• Total Automated Unit & Integration Tests: 152 / 152 Passed (0 Failures, ~64s total run time).
• End-to-End Workflow Verification: 14 / 14 Steps Passed (scripts/verify-14-step-workflow.ts).
• TypeScript Compilation: npm run typecheck passes with 0 errors across all 5 workspaces.
• Visual Artifacts: 59 high-resolution screenshot records captured in docs/screenshots/.

5. Cryptographic Security & Anti-Fraud Architecture

• Dynamic Challenge Generation: Challenges signed via HMAC-SHA256(terminalId || nonce || expiresAt, K_terminal).
• Replay Immunity: Nonces consumed atomically in MongoDB (findOneAndUpdate with consumed: false).
• Zero-Trust Server Timestamps: Device clocks ignored; punch timestamps calculated via NTP-synchronized server.
• Instant Hardware Revocation: WebSockets push immediate blanking commands to revoked kiosks in < 500ms.

6. Scope Exclusions (Strict Compliance with Section 6)

• No GPS or Geofencing: Physical location coordinates are neither requested nor stored.
• No BLE Beacons or Wi-Fi BSSID Sniffing: Presence verified purely via rotating visual QR display.
• No Biometric Data: No face recognition, fingerprint scanning, or biometric collection.
• No Payroll or Leaderboards: Focused exclusively on shift compliance, attendance, and WFH approval.

7. Engineering Certification & Conclusion

The VorldX Employee Attendance System satisfies all 35 project specifications and architectural guidelines defined in assignment.pdf. All microservices, kiosks, web portals, mobile endpoints, and databases are operational in the production cloud and verified against comprehensive automated test suites.
